Fluorescent Energy Transfer Nucleic Acid Probes: Designs and Protocols (Methods in Molecular Biology)

Fluorescent Energy Transfer Nucleic Acid Probes: Designs and Protocols (Methods in Molecular Biology)

Fluorescent nucleic acid probes, which use energy transfer, include such constructs as molecular beacons, molecular break lights, Scorpion primers, TaqMan probes, and others. These probes signal detection of their targets by changing either the intensity or the color of their fluorescence. Not surprisingly, these luminous, multicolored probes carry more flashy names than their counterparts in the other fields of molecular biology. In recent years, fluorescent probes and assays, which make use of energy transfer, have multiplied at a high rate and have found numerous applications. However, in spite of this explosive growth in the field, there are no manuals summarizing different protocols and fluorescent probe designs. In view of this, the main objective of *Fluorescent Energy Transfer Nucleic Acid Probes: Designs and Protocols* is to provide such a collection. Oligonucleotides with one or several chromophore tags can form fluorescent probes capable of energy transfer. Energy transport within the probe can occur via the resonance energy transfer mechanism, also called Förster transfer, or by non-Förster transfer mechanisms. Although the probes using Förster transfer were developed and used first, the later non-Förster-based probes, such as molecular beacons, now represent an attractive and widely used option. The term “fluorescent energy transfer probes” in the title of this book covers both Förster-based fluorescence resonance energy transfer (FRET) probes and probes using non-FRET mechanisms. Energy transfer probes serve as molecule-size sensors, changing their fluorescence upon detection of various DNA reactions.

From reader reviews:

Louis Vasquez:

Reading a book tends to be new life style on this era globalization. With looking at you can get a lot of information that could give you benefit in your life. Having book everyone in this world could share their idea. Textbooks can also inspire a lot of people. Many author can inspire their own reader with their story or their experience. Not only the story that share in the guides. But also they write about advantage about something that you need illustration. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that exist now. The authors nowadays always try to improve their skill in writing, they also doing some study before they write to the book. One of them is this Fluorescent Energy Transfer Nucleic Acid Probes: Designs and Protocols (Methods in Molecular Biology).

Jasmine Myers:

Fluorescent Energy Transfer Nucleic Acid Probes: Designs and Protocols (Methods in Molecular Biology) can be one of your beginner books that are good idea. Many of us recommend that straight away because this reserve has good vocabulary that will increase your knowledge in vocabulary, easy to understand, bit entertaining but nonetheless delivering the information. The copy writer giving his/her effort to place every word into satisfaction arrangement in writing Fluorescent Energy Transfer Nucleic Acid Probes: Designs and Protocols (Methods in Molecular Biology) however doesn't forget the main point, giving the reader the hottest and based confirm resource information that maybe you can be one of it. This great information can certainly drawn you into completely new stage of crucial thinking.

Derek Winter:

In this era globalization it is important to someone to find information. The information will make someone to understand the condition of the world. The healthiness of the world makes the information better to share. You can find a lot of referrals to get information example: internet, paper, book, and soon. You can observe that now, a lot of publisher that will print many kinds of book. The book that recommended to your account is Fluorescent Energy Transfer Nucleic Acid Probes: Designs and Protocols (Methods in Molecular Biology) this publication consist a lot of the information of the condition of this world now. This kind of book was represented how can the world has grown up. The dialect styles that writer use for explain it is easy to understand. The writer made some investigation when he makes this book. That is why this book acceptable all of you.

Kevin Dobson:

Many people spending their time by playing outside having friends, fun activity along with family or just watching TV all day long. You can have new activity to enjoy your whole day by looking at a book. Ugh, you think reading a book can actually hard because you have to bring the book everywhere? It okay you can have the e-book, having everywhere you want in your Cell phone. Like Fluorescent Energy Transfer Nucleic

Acid Probes: Designs and Protocols (Methods in Molecular Biology) which is obtaining the e-book version.
So , try out this book? Let's observe.
