Charged Particle Traps: Physics and Techniques of Charged Particle Field Confinement (Springer Series on Atomic, Optical, and Plasma Physics) F. G. Major, Viorica N. Gheorghe, Günther Werth

Over the last quarter of this century, revolutionary advances have been made both in kind and in precision in the application of particle traps to the study of the physics of charged particles, leading to intensified interest in, and wide proliferation of, this topic. This book is intended as a timely addition to the literature, providing a systematic unified treatment of the subject, from the point of view of the application of these devices to fundamental atomic and particle physics.

The technique of using electromagnetic fields to confine and isolate atomic particles in vacuo, rather than by material walls of a container, was initially

conceived by W. Pauli in the form of a 3D version of the original rf quadrupole mass filter, for which he shared the 1989 Nobel Prize in physics [1], whereas H.G. Dehmelt who also shared the 1989 Nobel Prize [2] saw these devices (including the Penning trap) as a way of isolating electrons and ions, for the purposes of high resolution spectroscopy. These two broad areas of application have developed more or less independently, each attaining a remarkable degree of sophistication and generating widespread interest and experimental activity.

From reader reviews:

Ruth Barnett:

Why don't make it to become your habit? Right now, try to ready your time to do the important behave, like looking for your favorite publication and reading a guide. Beside you can solve your long lasting problem; you can add your knowledge by the guide entitled Charged Particle Traps: Physics and Techniques of Charged Particle Field Confinement (Springer Series on Atomic, Optical, and Plasma Physics). Try to the actual book Charged Particle Traps: Physics and Techniques of Charged Particle Field Confinement (Springer Series on Atomic, Optical, and Plasma Physics) as your good friend. It means that it can to be your friend when you really feel alone and beside that course make you smarter than ever. Yeah, it is very fortunated for you. The book makes you much more confidence because you can know everything by the book. So , we should make new experience and also knowledge with this book.

Jillian Diaz:

Playing with family in a very park, coming to see the coastal world or hanging out with pals is thing that usually you may have done when you have spare time, subsequently why you don't try matter that really opposite from that. One particular activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you are ride on and with addition of information. Even you love Charged Particle Traps: Physics and Techniques of Charged Particle Field Confinement (Springer Series on Atomic, Optical, and Plasma Physics), it is possible to enjoy both. It is fine combination right, you still want to miss it? What kind of hangout type is it? Oh occur its mind hangout fellas. What? Still don't have it, oh come on its known as reading friends.

Alex Estepp:

Are you kind of active person, only have 10 or maybe 15 minute in your day time to upgrading your mind skill or thinking skill also analytical thinking? Then you are having problem with the book as compared to can satisfy your short time to read it because all of this time you only find publication that need more time to be study. Charged Particle Traps: Physics and Techniques of Charged Particle Field Confinement (Springer Series on Atomic, Optical, and Plasma Physics) can be your answer mainly because it can be read by an individual who have those short spare time problems.

Kelly Jackson:

Reading a book to become new life style in this season; every people loves to study a book. When you read a book you can get a great deal of benefit. When you read guides, you can improve your knowledge, due to the fact book has a lot of information onto it. The information that you will get depend on what forms of book that you have read. If you need to get information about your review, you can read education books, but if you want to entertain yourself you can read a fiction books, such us novel, comics, and soon. The Charged

Particle Traps: Physics and Techniques of Charged Particle Field Confinement (Springer Series on Atomic, Optical, and Plasma Physics) will give you a new experience in reading a book.
