Epilepsy surgery is defined as any neurosurgical intervention whose primary objective is to relieve medically intractable epilepsy (European Federation of Neurological Societies Task Force 2000). The aim of epilepsy surgery is to reduce the number and intensity of seizures, minimise neurological morbidity and antiepileptic drug (AED) toxicity, and improve quality of life. By definition, epilepsy surgery does not include normal surgical treatment of intracranial lesions where the primary goal is to diagnose and possibly remove the pathological target, often an advancing tumour. In these patients, epileptic seizures are only one symptom of the lesion and will be treated concomitantly as part of the procedure. Temporal lobe epilepsy (TLE) is recognised as the most common type of refractory, focal epilepsy. In one third of all cases the neuronal systems responsible for the seizures that characterise this form of epilepsy fail to respond to currently available AEDs (Andermann F 2002). New imaging methods, especially magnetic resonance imaging (MRI), identify localising abnormalities in an increasing proportion of patients with intractable focal epilepsy. Consequently, the accuracy of the preoperative diagnostic procedures has been significantly improved during the last decade; and suitable candidates for surgery can be selected more reliably. Currently the main resources in most epilepsy surgery centres have been used to evaluate candidates for TLE surgery.

From reader reviews:

Tony Paulson:

As people who live in often the modest era should be up-date about what going on or data even knowledge to make these people keep up with the era and that is always change and move ahead. Some of you maybe will certainly update themselves by reading books. It is a good choice for you personally but the problems coming to a person is you don't know which you should start with. This Advances and Technical Standards in Neurosurgery is our recommendation to make you keep up with the world. Why, because this book serves what you want and want in this era.

Dewayne Campbell:

The publication untitled Advances and Technical Standards in Neurosurgery is the publication that recommended to you to see. You can see the quality of the guide content that will be shown to an individual. The language that article author use to explained their ideas are easily to understand. The article author was did a lot of research when write the book, hence the information that they share for your requirements is absolutely accurate. You also could get the e-book of Advances and Technical Standards in Neurosurgery from the publisher to make you far more enjoy free time.

Camille Wolfe:

People live in this new day of lifestyle always try to and must have the spare time or they will get wide range of stress from both daily life and work. So , when we ask do people have spare time, we will say absolutely without a doubt. People is human not a robot. Then we request again, what kind of activity do you have when the spare time coming to anyone of course your answer may unlimited right. Then do you try this one, reading ebooks. It can be your alternative within spending your spare time, typically the book you have read is usually Advances and Technical Standards in Neurosurgery.

Martha Bryant:

Book is one of source of expertise. We can add our understanding from it. Not only for students but native or citizen will need book to know the update information of year to year. As we know those books have many advantages. Beside most of us add our knowledge, can bring us to around the world. By book Advances and Technical Standards in Neurosurgery we can get more advantage. Don't you to definitely be creative people? For being creative person must love to read a book. Merely choose the best book that ideal with your aim. Don't always be doubt to change your life with this book Advances and Technical Standards in Neurosurgery. You can more appealing than now.
